Starting a Prevention Program for Opioid Abuse in Construction
What is the Problem?

Opioid addiction and overdose deaths are found everywhere across the US, but the construction industry has been hit really hard. Opioids are often prescribed to treat pain caused by work tasks and injuries in construction.

1 in 3 construction workers have injuries from work; prescription opioid use is 3x higher among construction workers with a work related injury.¹

1 in 5 construction workers have a drug addiction.²

Construction workers are 6-7 times more likely to die of an overdose than workers from other industries.³

Employers spend an average of $8,817 on each employee with untreated drug addiction.⁴

Workers with untreated drug addiction miss an average of 29 days of work yearly compared to 10.5 by the general work force.⁵
How to Get Started

- Think through how your organization deals with drug use
- Review common steps
- Recognize a multi-organization situation

Multi-Organization Situation

There are eight elements or parts of a prevention program for opioids and substance abuse. Employers, unions, and health funds each control different elements. Work with other organizations to address all elements. A program with all eight elements is the best program for workers.

Common Steps to Build a Culture of Care:
Step 1. Education for prevention
Step 2. Policy and compliance
Step 3. Mental and physical health care
Step 4. Working after treatment for opioid use disorder

Union/Health and Welfare Fund
- Healthcare Insurance and Pharmacy Coverage
- Member Assistance Program (MAP)
- Culture of Care
- Member/Employee Education
- Written Substance Use Policy: Collective Bargaining Agreement
- Drug Testing*

Employer
- Supervisor Training
- Legal Concerns: Return to Work

*Drug testing requirements and responsibilities depend on collective bargaining agreement and State and Federal laws; certain industries and jobs involving safety sensitive tasks have specific drug testing mandates.
Important Elements of a Prevention Program

Below are eight elements recommended for an organization’s prevention program for opioids and substance abuse. These elements were based on employer guidelines from the Substance Abuse and Mental Health Services Administration (SAMHSA) and the National Safety Council (NSC), peer-reviewed articles, and interviews with subject experts and industry stakeholders. Use this “how to get started” guide to review your company’s program and make a plan to improve it.

Build a Culture of Care
Building a culture of care starts with a commitment from leadership and sharing that commitment to all employees.

Each of the next eight sections will have questions for you to think through to see how your organization is doing and areas you could do better.

<table>
<thead>
<tr>
<th>Questions: Culture of Care</th>
<th>Resource</th>
</tr>
</thead>
<tbody>
<tr>
<td>Has your leadership made a commitment to reduce harmful effects of opioids on your employees?</td>
<td>APA: Leadership Support</td>
</tr>
<tr>
<td>Has your leadership shown its commitment in writing or through actions (e.g., newsletter, mission statement, presentations)?</td>
<td>CSDZ Building a Caring Culture</td>
</tr>
</tbody>
</table>

STEP 1: Education for Prevention

Educate Employees on Opioid Risks
Educate staff on how opioids affect health, job performance, workplace safety, workplace expectations, policies and prevention.

<table>
<thead>
<tr>
<th>Question: Employee Education</th>
<th>Resource</th>
</tr>
</thead>
<tbody>
<tr>
<td>Does your organization provide employees training about opioid risks and how to get help if they are struggling with opioids?</td>
<td><a href="#">The Hartford: Shatter Proof Addiction</a></td>
</tr>
</tbody>
</table>

Train Supervisors on Managing Workplace Substance Misuse
All supervisors should understand the opioid policies and their role in managing substance misuse in the workplace. Training supervisors can help them better recognize problems and talk to workers about substance misuse.

<table>
<thead>
<tr>
<th>Question: Train Supervisors on Managing Workplace Substance Misuse</th>
<th>Resource</th>
</tr>
</thead>
<tbody>
<tr>
<td>Does your organization have any training for supervisors on recognizing signs of impairment and substance misuse?</td>
<td><a href="#">NSC: Training for Supervisors</a></td>
</tr>
</tbody>
</table>

EDUCATE EMPLOYEES: HOW TO GET STARTED
Include opioid training as part of the new hire process, toolbox talks, or staff meetings. See the resource provided for educational materials.

TRAIN SUPERVISORS: HOW TO GET STARTED
If you already provide supervisor training on other safety topics, include topics on how to talk to workers and manage opioid related issues as part of your current training.

**STEP 2: Policy and Compliance**

**Written Drug Policy**
A written drug policy should clearly state the company’s goal and meet the needs of the workplace. The policy should include the purpose, expectations, consequences, and appeals. Policies may cover the minimum requirements of the law or cover a broader range of substance use issues to improve health and safety.

<table>
<thead>
<tr>
<th>Question: Written Drug Policy</th>
<th>Resource</th>
</tr>
</thead>
<tbody>
<tr>
<td>Does your organization have a written drug free workplace policy?</td>
<td>SAMHSA’s Developing a DFWP Policy</td>
</tr>
</tbody>
</table>

**Drug Testing Program**
A drug testing program should be designed to protect the workforce, prevent employees from coming to work impaired, and keep equipment and property free from harm. Some industries and jobs with safety concerns have specific drug testing rules.

<table>
<thead>
<tr>
<th>Question: Testing Program</th>
<th>Resource</th>
</tr>
</thead>
<tbody>
<tr>
<td>Does your organization require routine drug tests for a drug free work force?</td>
<td>NSC: Drug Testing and Opioids</td>
</tr>
</tbody>
</table>

## STEP 3: Mental and physical health care

**Healthcare Insurance and Pharmacy Coverage**

Provide healthcare and pharmacy coverage to support non-opioid pain management, behavioral health, and recovery treatment.

<table>
<thead>
<tr>
<th>Questions: Health Care Insurance and Pharmacy Coverage</th>
<th>Resource</th>
</tr>
</thead>
<tbody>
<tr>
<td>Does your organization’s medical insurance cover non-prescription opioid pain management (i.e. physical therapy)?</td>
<td></td>
</tr>
<tr>
<td>Does your organization's behavioral health insurance cover inpatient and outpatient recovery services for those diagnosed with opioid use disorder?</td>
<td>Structuring Health Benefits</td>
</tr>
<tr>
<td>Does your organization's pharmacy benefit plan have an opioid prescription monitoring program?</td>
<td></td>
</tr>
<tr>
<td>Does your organization's pharmacy benefit cover medication for opioid addiction treatment (i.e. buprenorphine) as a long term treatment?</td>
<td>MAT for Opiate Dependence</td>
</tr>
</tbody>
</table>

**HEALTH CARE AND PHARMACY COVERAGE: HOW TO GET STARTED**

Make sure employees can get access to behavioral counselors and providers. Provide nearby physical locations for in-person sessions, telehealth options, treatment hours outside of work hours, and crisis management hotlines.

Employee/Member Assistance Program (EAP/MAP)

These programs can provide screenings for workers, short-term counseling, and referral to specialty treatment or behavioral health services. Most organizations’ EAP/MAP have very low participation rates even though their employees’ needs for these services are high. Call your EAP/MAP to find out about other services that may benefit your substance use program.

<table>
<thead>
<tr>
<th>Question: EAP/MAP</th>
<th>Resource</th>
</tr>
</thead>
<tbody>
<tr>
<td>Does your organization's EAP/MAP participate in delivering programs or services in your organization (i.e. deliver training, assist with getting workers to treatment and return to work)?</td>
<td>EASNA: EAP Purchaser Guide</td>
</tr>
</tbody>
</table>

Step 4. Working after treatment for opioid use disorder

Legal Concerns

Make sure your organization follows workplace laws. These include the Americans with Disabilities Act Amendments Act of 2008 and the Mental Health Parity and Addiction Equity Act of 2008. These laws include workers’ return to work rights after receiving treatment for a substance use problem.

<table>
<thead>
<tr>
<th>Question: Legal Concerns</th>
<th>Resource</th>
</tr>
</thead>
<tbody>
<tr>
<td>Does your organization's return to work policy cover employees with substance use disorder?</td>
<td>JAN-Drug Addiction</td>
</tr>
</tbody>
</table>
